

Bengal Cat Trait Scoring

Reference Sheet

Consider the cat is standing on all four legs. Confine the area of consideration to mid lateral surface of each cat, below dorsal surface and above ventral surface. Plainly, consider the side abdominal surface of the cat behind front legs, in front of hips, below the curve of the body turns downward toward the cat's side from the back and above where the body turns inward to meet on the chest/abdomen.

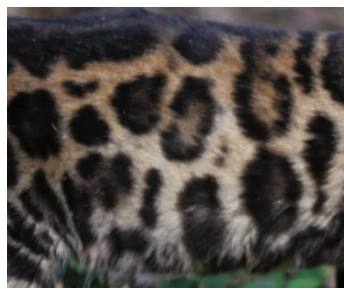

Rufousing (reddish/orange) overall coloration. How reddish orange is this cat?

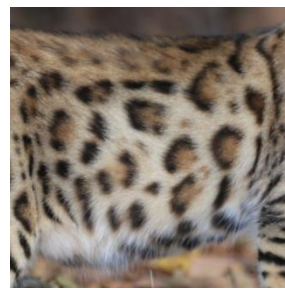

Assume all these cats are black (brown) tabby, not diluted with black tail tips. Background color goes from tawny grayish brown to yellowish with no hint of orange to yellow with some orange, to yellow with visible orange centers to rosettes to orange background, orange rosette center and little to no black on markings.
